Testing the ASUS G20AJ with the usual suite of PC Mark 8, 3D Mark, Cinebench and a selection of games have delivered a solid set of results that are exactly in line with our expectations from the 4 A\* Raw I7 and GTX 970. a ~ 5 Small and looks good too. The G20AJ isn't quite perfect as Asus really don't want you to dye with the interior, so you should treat this PC as a sealed unit. As it happens this is a bit of an optical illusion as the game console can lay flat under the TV while the ASUS ROG G20AJ needs to stand up to allow the exhausted hot air to rise and dissuade it safely. Closing thoughts We love the ASUS ROG G20AJ a great deal. The other oddity is that G20AJ comes with Windows 84 bit 8.1 along with Microsoft's offer of a free upgrade to Windows 10. Discuss on our Facebook page, here. Asus Web Storage is prone to pop up occasionally to remember that there is a piece of space in the cloud that bears your name. Core I7 and GTX 970 provide good Full HD frames. The key point here is many small form factor PCs, keep the size to a minimum by limiting the amount of heat they produce. Ultra-quiet operation 22 dB while inactive. In fact, Asus claims that the G20AJ is "the most powerful compact desktop in the world, which is a pretty bold statement. Sure, you might want to lower the quality settings in Grand Theft Auto V but it's true for pretty much any PC that doesn't have a GTX 980 or better. You need two mains sockets and the two power sockets on the back of the chassis. No doubt it is theoretically possible to upgrade the GTX 970 graphics card at some point in the future, but it seems like a good amount of hard work and probably makes perfect sense to treat the G20AJ as a unit. This is something a surprise that Windows 10 is simply installed at the factory. Asus packed a a Core I7 in a small frame and kept under control with an oversized portable style cooler that does a great job. Yes, we would have been even happier\* if the CPU was Skylake rather than Haswell but this A\* a fairly minor detail and no doubt the older silicon helps keep the price a little lower\*. They took a desktop Core I7 cpu and a GTX 970 desktop graphics card and created the two in a small 12.5-liter chassis that looks to be a similar size as a Sony Playstation 4. The graphics temperature was a duration of 73 graphics load that A\* very acceptable. Pros: small form factor. Opening the casing will not be particularly difficult but also will not be particularly informative. Visually the most unusual appearance\* of the G20AJ A\* external power supply consisting of two power residues in a plastic frame. Against: minimum update path. Instead, the G20AJ goes by the throat and promises a full hd gaming experience that will put Playstation 4 and Xbox One to Shame. CIAV had the effect of limiting its capacity. Gaming games like the GTX 750TI graphics and the Dual Core I7-4510HQ CPU were good but not class leaders. For example the game console PC GR8 ASUS ROG GR8 we saw a little back (here) reached its tiny form factor effectively regaining a laptop in a desktop form factor. In fact it would be safe to say that the G20AJ has hit us and won us over with its combination of small factor, high performance and functional republic players like the RGB lighting system.
